## 1 Mackley's Carbon Commitments

Climate change adaptation is Mackley's core business as we deliver infrastructure to improve the resilience of coastal and riverside communities and support regional growth and sustainable use of resources. We are also committed to helping reduce carbon emissions from our operations. We are members of the **SME Climate Hub** and fully support the **UN Sustainable Development Goals** relevant to our activities through our Business Strategy and Sustainability Policy.

Mackley's mission is:

*'Enhancing the UK's rivers, coastal and water infrastructure, to help communities and wildlife meet the challenges of climate change.'*

*'I believe we should have a positive impact through our work and our three pillars of sustainability are People – our most important asset and we need to support a diverse staff base to achieve their full potential in all aspects of the business through training, mentoring and opportunities. Planet - we will ensure all of our operations have minimum negative impact on the environment and that we create and improve habitats by working with nature and reducing our carbon emissions. Profit – in order to provide our staff with a sustainable future and support the community we must create value in all our projects so we can plough investment back into the business and through innovation grow our business year on year.'*

**Ben Hamer, Mackley Managing Director**

We make the following pledges compared to our 2020 baseline year:

- 1. Reduce our absolute Scopes 1 and 2 emissions by 50% by 2030**
- 2. Reach Net Zero before 2050** – in line with the UK Government's target and Science Based Targets.
- 3. Reduce our absolute Scope 3 emissions as far as possible by 2030 in line with our commitment to reach net zero before 2050.**
- 4. Strive to support innovation in the use of sustainable materials.**

We are a rapidly growing company and our emissions total is very reliant upon construction materials over which we have very limited influence. We therefore cannot commit to reducing our absolute emissions from Scope 3 by 50% by 2030. Nevertheless, our reduction plan includes actions aimed at reducing our Scope 3 emissions within the limits of our influence.

A summary of our baseline figures and progress is shown in Section 3, with details of how we calculate our emissions in Appendix 1.

## 2 Carbon reduction Initiatives

The following completed and proposed initiatives will help us meet our carbon targets.

### 2.1 Completed initiatives – 2018-2022

- a) Joined SME Climate Hub – raised awareness and publicly committed to a low carbon future
- b) Switched to green tariff electricity – saved up to 40T CO<sub>2</sub>e per year (pre-Covid figure)
- c) Trialled HVO fuel on 2 projects and confirmed its suitability for use in our plant. These trials saved 199T CO<sub>2</sub>e compared to the equivalent gas oil.
- d) Installed 8 EV charge points at head office
- e) EV charge point on 1 site
- f) Trailled low carbon concrete on a coastal project
- g) Increase from 0% - 12.6% of total fleet vehicles hybrid with less than CO<sub>2</sub>e 50kg/km. Using Defra's conversion factors, a hybrid petrol car creates 10-15% less carbon emissions than a standard petrol car (based on medium sized cars / km driven).
- h) Staff training – low carbon engineering CPD for 14 Mackley staff (12% of total / 30% of managerial staff)

### 2.2 Planned Initiatives - 2022-2030

#### 2.2.1 Scope 1: Site fuel (approx. 60% of Scope 1 and 2 emissions):

1. **Transition to low carbon fuel for plant – target 70% of HVO or other alternative by 2030**
  - 1.i. Investigate HVO supply commitments with Crown Fuels and others
2. **Trial hydrogen powered plant when available**
3. **Trial hydrogen powered site welfare / offices**
4. **Trial modern site eco-offices/welfare with solar power**

#### 2.2.2 Scope 1: Fleet fuel (approx. 30% of Scopes 1 and 2 emissions)

5. **Transition to hybrid plug in / EV fleet – target 30% full EV by 2030**
  - 5.i. Install temporary EV chargers on larger sites
  - 5.ii. Identify means of reclaiming expenses for EV charging remotely from head office
  - 5.iii. Provide staff incentives to switch to Hybrid and EV vehicles

### 2.2.3 Scope 2: Electricity

6. **Maintain green tariff electricity – target 100% green tariff power at head office, regional offices and site offices from 2022 until 2030.**

6.i. Promote connection to grid power for larger sites

### 2.2.4 Scope 3: Purchased Materials

Often, Mackley do not have influence over the designs or specifications of materials used in our projects. Our actions therefore, aim to encourage designers and clients to use low carbon options.

7. **Continue trials of low carbon concrete and pre-cast concrete on coastal environments – share data with clients and designers.**
8. **Early Contractor Involvement (ECI) contracts to include low carbon options for designers and clients**
9. **Maintain use of FSC/PEFC certified timber on our projects – timber from sustainably managed forests stores carbon if recycled at end of life. As we use 100% FSC/PEFC certified timber and the majority of our construction timbers are re-used, we can record carbon stored within our Scope 3 figures. FSC/PEFC timber equated to -3,500 TCO<sub>2</sub>e in our baseline year using figures from the ICE Database 2019.**
10. **Estimators and Procurement Team to offer products from the UK where available to reduce transportation emissions**
11. **Promote lower carbon options in tenders**
  - 11.i Produce a low carbon options appendix

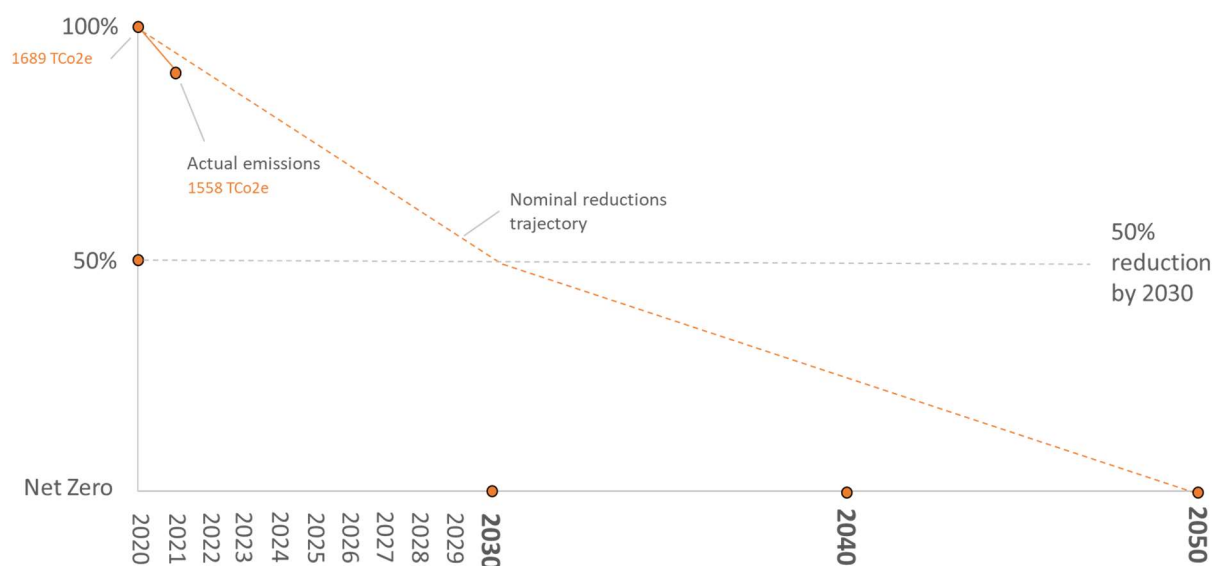

### 2.2.5 Actions across all scopes

12. **Improve Mackley's carbon literacy**
  - 12.i. Include low carbon engineering within new starter inductions and site inductions
  - 12.ii. Produce low carbon TBT for use on sites
  - 12.iii. Carbon and engineering training for site managers, estimating, design and procurement staff
  - 12.iv. Identify staff to develop more detailed carbon knowledge
13. **Improve the accuracy of carbon measurements**
  - 13.i Examine ways to capture emissions from electricity used from EV vehicles within our Scope 1 footprint
  - 13.ii Increase the accuracy of upstream transportation figures

3 Carbon Reduction Figures

Mackley Scope 1 and 2 emissions path to net zero

**Commentary on figures:** The figures above and the table on the following page show a steep decrease in carbon emissions between 2020 and 2021. The decrease in Scopes 1 and 2 emissions may be the result of carbon reduction initiatives, most significantly the use of HVO fuel at several projects in 2021. However, this will require monitoring over future years to confirm.

**Scope 3 declines:** The sharp decline in PPN0621 emissions and overall emissions between 2020 and 2021 is due to variation in our project requirements. 2020 saw unusually high figures for Scope 3 'purchased goods' as the result of large purchases of steel piles, rock armour and timber, and high emissions from Scope 3 'upstream transportation' with the timber and rock imported from overseas. Mackley's Scope 3 emissions are highly variable year on year and we are largely reliant upon industry wide emissions reductions to tackle this aspect of our operational carbon emissions.

The low emissions from Scope 3 business travel, commuting and water are largely the result from Covid restrictions.

The zero emissions for Scope 2 electricity (see table overleaf) reflect the UK rules for reporting green tariffs. Mackley's electricity usage equates to approximately 40T of CO<sub>2</sub>e if a standard tariff were used.

The zero emissions for downstream transportation reflect the nature of our business in that we have no product deliveries separate from our construction.

## 4 Carbon emissions monitoring

		2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030
<b>Carbon Intensity</b> – 1000T CO <sub>2</sub> e / £million turnover		37.52										
<b>Sources of emissions</b>												
<b>Scope 1</b>	Fleet and plant fuel	1,688.62	1,558.93									
<b>Scope 2</b>	Purchased electricity	0.00	0.00									
<b>PPN 06/21 Scope 3</b>	Business Travel	1.12	1.17									
	Employee commuting	15.00	18.75									
	Waste	45.66	40.60									
	u/s transportation of goods	2,992.35	522.42									
	d/s transportation and distribution	0.00	0.00									
<b>Additional Scope 3</b>	Water use and treatment	0.29	0.41									
	Purchased goods	10,492.01	3,865.96									

## 5 Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the JT Mackley Board of Directors

Signed on behalf of the Supplier:

Ben Hamer, Managing Director
